Video IQ

Smarter Way to Protect Your Assets

- Get Police On Your Doorstep Faster
- Avoid Unnecessary Patrol Costs
- The Most Secure And Reliable Solution Available

Criminals are becoming smarter and faster—does your security system have the intelligence and capability to protect your business assets, stock, and staff?

Video IQ is a smart and effective way to transform any CCTV system into a smart monitored security solution, providing real-time proactive security management. This will significantly speed up response times from police and guards, preventing loss and damages and ensuring fast and effective action against criminal activity.

Video IQ

Smarter Way to Protect Your Assets

Video IQ in Action:

With traditional alarm systems, your monitoring centre is alerted of activity, they contact your business and then send a security guard to investigate at your cost.

With Video IQ, video alerts are sent in real-time, containing clips before and after the actual triggering incident, allowing the monitoring centre to make intelligent decisions quickly. If criminal activity has occurred, your provider has the video evidence to get police to take action faster.

This is all delivered securely as video clips are sent directly from the cameras to the monitoring centre via Permaconn's ISO 27001 certified network—eliminating the need to access your IT network and greatly reducing cyber risks.

The Video IQ Difference:

- **Instant video verification**
  Video footage leading up to and of the actual incident enables immediate and accurate verification. This also helps to quickly determine false alarms reducing the need to contact you or send guard services at your cost.
- **Video alerts**
  Video clips are sent instantly to the monitoring centre, dramatically reducing the time it takes to act on incidents giving your security provider complete visibility of any incident.
- **Fast and effective response**
  Video evidence allows your Security Company to deploy Police ensuring fast response to any critical incident.
- **Virtual Patrol**
  Proactively schedule video-based patrols using existing CCTV cameras sent securely and reviewed instantly by your security provider.
- **Reduced Installation Complexity & Increased Security**
  Video IQ is easy to integrate to your existing security system via your network, or better yet, run it independently, via Permaconn's ISO 27001 cyber secure network. That means no drilling into complex IT infrastructure, making things simpler and much more secure.
- **Eliminate The Risk of Privacy Breaches**
  Video clips are sent straight from cameras to the monitoring centre via Permaconn's ISO 27001 certified network eliminating the need to access your network and significantly reducing cyber risks.
- **Multiple camera connection**
  All cameras in and around your premises can be connected to a single network, with fast and easy integration.
- **Ultimate confidence in the reliability of your service**
  With 99.99% uptime, it's the most confident you can be with protecting your assets.
